Software engineer who owns business applications end to end, functionally and technically, and keeps them running in production, on Java Spring Boot, Node.js and Python back ends with React and Vue front ends. At Nestlé Globe IS/IT, technical owner and SPOC of ~120 globally used business applications, 6 of them business-critical: L3 sustain, accredited Change Board approver and go-live lead inside a formal change and release process. At HEIG-VD, designed, built and owned the school's exam and lab platforms through four years of production, and on the CIIP platform worked as the developer engineer of an agile team, from feature redesigns and API rework to releases on Kubernetes, urgent fixes travelling a dedicated hotfix lane. AI-assisted development has been daily practice since 2021, everything the agents produce reviewed and tested before it ships.

EXPERIENCE

Software Engineer · Platform Development, Operations and Ownership · HEIG-VD ·

Aug 2022 – Aug 2026

University of Applied Sciences Western Switzerland

Yverdon-les-Bains, Switzerland (Hybrid)

- Owned the school's exam and lab platforms (Opendidac, Roster) functionally and technically and operated them in production through four years of exam sessions, where the institution can afford no failure: releases, incident handling, schema migrations on live data with integrity preserved, and technical referent toward teachers, researchers and administration.
- Developer engineer on the CIIP teaching-media platform inside an agile team (Jira, Confluence, Bitbucket): new versions of major features, API rework and redesign (endpoints, services, DTOs, schema), large Flyway migrations on the MySQL schema, bug fixes, pull requests peer-reviewed both ways, and ownership of the Kubernetes workloads' service layer through to production releases, urgent corrections travelling a dedicated hotfix pipeline. Spring Boot, Nuxt/Vue, OpenSearch.
- Supported students hands-on in the lab sessions of three courses (web technologies, programming, DevOps): live unblocking, grading, and Cypress end-to-end suites authored to autograde student web labs across semesters.
- Built with AI coding agents daily, agent output reviewed and tested before it lands, and ran applied AI feasibility studies for armasuisse and Planair on self-hosted models, driven by their data-sovereignty requirements.

SELECTED PROJECTS

CIIP Platform

2024 – 2026

Teaching-media management and educational coordination platform for the public schools of Suisse romande and Ticino: 43,000+ teacher accounts, 565 schools, 15+ federated identity providers, 230,000+ tracked resource interactions. Multi-service Spring Boot architecture with a central identity service, developer engineer in the team through to production releases.

Spring Boot

Java

MySQL

Kubernetes

Nuxt / Vue.js

OpenSearch

Flyway

Bitbucket Pipelines

Opendidac

2022 – 2026

Open-source platform for training exercises and summative exams, operated through sessions where a failure reaches students' academic records. Adopted voluntarily across 20+ courses and 1,000+ students a year, every professor who took it up stayed, and it took over the exam use case the incumbent platform had never significantly covered.

Next.js

PostgreSQL

Prisma

OIDC

Electron

GitHub Actions

Roster

2026

In-house replacement for GitHub Classroom, built from scratch to first production use in one month when GitHub announced its shutdown. Classes, rosters, groups and lab repositories are created each semester and a reconcile engine audits them against the real GitHub state, repairing drift with teacher approval.

EARLIER CAREER

- 2016 – 2017
- Freelance Web Developer · Independent · Online sports-club management solution (court booking, members, payments) and a marketplace for driving schools, PHP and MySQL.
- 2015 – 2016
- E-Commerce Consultant · High-Creek, Lausanne · Redesigned an international e-commerce platform and grew it to 12k monthly visitors and ~20k CHF of sales within two months through organic search alone.

IT Project Manager / Coordinator / L3 Application Technical Support · Nestlé · Globe IS/IT

2011 – 2015

Bussigny, Switzerland

- Technical SPOC for ~120 globally used business applications, including 6 business-critical solutions (.NET solutions, SSRS, high-traffic intranet, R&D and recipe-management platforms), on ~200 production application servers of ~600 across all environments.
- L3 Global Business Solution sustain: incident and problem resolution on the business-critical solutions, structured root cause analysis (GSTD), runbooks and documentation. Handed the sustain over to the offshore team in Chennai (trainings, documentation, knowledge transfer for 6 business-critical solutions and 4 shared environments hosting 120 web applications) and monitored the transition.
- Accredited Change Board approver across Globe IS/IT: compliance-by-design checks, QA gates, tested release plans, PrePROD and PROD implementation instructions with rollback plans. Delivered Change & Release process training across the organisation.
- Directed solution go-lives with business acceptance and functional testing. Coordinated the application-server migration to Windows Server 2008 (~\$5M support costs avoided), ran the 4S managed-services DEV environment of 120 servers (~\$8M saved yearly) and executed the “Call to Arms” security compliance project across 170 applications, 200 servers and 900 accounts.

- 2011
- Developer / Business Analyst, Web Developer · Redcats Suisse, eegoes, Lab4Tech · Automated performance reporting in C#, PHP/MySQL features for a social platform, ASP.NET MVC applications.
- 2007 – 2011
- Web Application Developer / E-Business Project Manager / Training & User Support · AgenceWeb SA (now Maxony Group), Nyon · Heavy contributor to Mailpro, the group's email-marketing SaaS still in service today. Built the Groupe Schenk wine e-commerce platform (22 branded storefronts), migrated ~15 applications serving ~3,000 clients to a reusable design model, trained and supported their users.

PUBLICATIONS
