[linkedin.com/in/stefan-teofanovic](https://www.linkedin.com/in/stefan-teofanovic)

Software engineer who takes web platforms from architecture to production operation, with React on the front end and Node.js, Python and Java APIs behind it. Two platforms designed, built and operated at HEIG-VD reached daily institutional service. One has carried high-stakes exam sessions since 2022 across 20+ courses and 1,000+ students a year, and every professor who took it up stayed. The CIIP intercantal education platform's Kubernetes workloads on Exoscale were mine to deploy, configure and release. Earlier, application ownership with change and release governance across a globally used business-application portfolio at Nestlé Globe IS/IT. AI-assisted development has been daily practice since GitHub Copilot's 2021 technical preview. Agents write, per-technology review skills read the code back, and the test suites gate what merges. Feasibility studies for armasuisse and Planair concluded that the self-hosted open models of the time fell short, and recommended against them.

EXPERIENCE

R&D Collaborator in Software Engineering · HEIG-VD – University of Applied Sciences

Aug 2022 – Aug 2026

Yverdon-les-Bains, Switzerland (Hybrid)

- Design, build and operation of the institute's educational and research platforms sat with one engineer, from data model and backend through front end, containerised deployment and live support during exam sessions. Schema migrations ran on live data across four production years.
- Technical referent toward teachers, researchers and administration, turning course and research needs into platform decisions, and into the documentation that lets someone else take the system over.
- Modernised the engineering practice across the portfolio, from React front ends and Node.js services to containerisation, orchestration and continuous delivery on a self-hosted GitHub Actions runner.
- Owned the Kubernetes workloads of the CIIP platform on Exoscale, from deployments and configuration through to releases, and ran a series of Flyway migrations on its large schema, inside an agile team where every pull request was reviewed both ways. Urgent production fixes travelled a dedicated hotfix pipeline, so they stayed inside the release process instead of being patched ad hoc.
- Academic assistant for Web Technologies, Programming 1 and DevOps courses, running the full eleven-lab DevOps track end to end to prepare student support, from Docker Compose and GitLab CI/CD to Helm, Prometheus, Grafana, OpenTelemetry and Jaeger.

SELECTED PROJECTS

Opendidac

since 2022

Training exercises and summative exams for a public engineering school, running 20+ courses, 1,000+ students and 200+ evaluations a year, its schema migrated on live data throughout. Open source, with a desktop client that raises the cost of AI-assisted cheating during exam sessions.

Next.js

PostgreSQL

Prisma

OIDC (SWITCH edu-ID)

Electron

GitHub Actions

CIIP platform

2024 – 2026

Teaching-media management and educational coordination for Suisse romande and Ticino, carrying 43,000+ teacher accounts and 565 schools through 15+ federated cantonal and institutional identity providers.

Vue.js

Spring Boot

MySQL

Kubernetes

Exoscale

JWT

Flyway

Roster

since Jun 2026

In-house replacement for GitHub Classroom, built when its shutdown was announced so programming courses keep distributing and collecting student labs. First production run went cleanly. Automated grading from each lab's unit tests is being added, with contribution patterns surfaced for a teacher to judge rather than scored.

TypeScript

React

Hono

Cloudflare Workers

Drizzle

OIDC

Planair AI Assistant

2024 – 2025

Feasibility study of an enterprise retrieval-augmented generation assistant for Planair SA, comparing a self-hosted pipeline against a managed platform, with groundedness measured on both.

Python

LlamaIndex

Ollama

Azure AI Foundry

pgvector

Docker

DVC Sync S3 API

2023

Gave researchers versioned, attributed annotations without manual exports, accepting writes from annotation tools as cloud storage and committing them onward into DVC and Git. Built for CSIA-PME, the Swiss AI Center for SMEs.

Python FastAPI S3 API / AWS SigV4 DVC MLOps

Data-Driven Surveys

2024

Research platform linking participants' authorised account data into personalised surveys, with plugin architectures on both the data-provider and the survey-platform side. Published at ACM CHI 2024.

Python Flask SQLAlchemy React OAuth2 Docker

CURIOSITY SIDE QUESTS

Charrette

2026, public

Public collection of agent skills for design work, built around aiview, an npm tool that renders every document an agent produces live in one browser tab.

React TypeScript Node.js SQLite Vitest

Lab Grader

2026

Grading skills that keep AI output governable, with every score traced to an approved criterion and anything unavoidably subjective flagged for human verification.

Agent skills Criteria-based scoring

Automated verification

EARLIER CAREER

2016 – 2017

Freelance Projects · Independent · Sports-club management solution (court and timeslot booking, members, role-based areas) and a driving-school marketplace.

2015 – 2016

E-Commerce Consultant · High-Creek · Rebuilt an international e-commerce platform to 12k monthly visitors and ~20k CHF of sales within two months, through organic search alone.

2011 – 2015

IT Project Manager / Coordinator / L3 Application Support · Nestlé Globe IS/IT · Technical single point of contact for ~120 globally used business applications, 6 of them business-critical, on ~200 production application servers of ~600 across all environments. Accredited change-board approver, and handed L3 sustain to offshore teams with runbooks and training.

May – Jul 2011

Developer / Business Analyst · Redcats Suisse (La Redoute) · Automated the daily operations performance reporting, integrating data from Nortel servers.

Mar – May 2011

Web Developer · eegoes LLC · Core features of a social-media platform.

Jan – Mar 2011

Web Developer · Lab4Tech · Enterprise applications on C# ASP.NET MVC with ExtJS front ends over JSON and XML.

2007 – 2011

Web Application Developer / E-Business Project Manager · AgenceWeb SA (now Maxony Group) · Heavy contributor to Mailpro, an email-marketing SaaS still in commercial service almost two decades later, shaping its newsletter composition experience and multi-queue sending infrastructure. Built its form-builder companion's first version, and a wine e-commerce platform of 22 separately branded vineyard storefronts, B2B and B2C.
